

# CIPHER WHEEL

# CIPHER WHEEL

## Instructions:

- Print previous page on 8 1/2 X 11 card stock
- Cut out circles
- Center the smaller circle on top of the larger circle, and attach by punching a metal brad through the center of both circles, and securing at the back.

## To use your cipher:

- Begin by writing the message you want to encode
- Take your cipher, and spin the smaller wheel so that the letters no longer match up with the letters on the larger wheel.
- Take note of the letter on the small wheel that matches up with “A” on the large wheel. This is now your “Key Letter.”
- To encode your message, find each letter on the large wheel, and write down the letter it lines up with on the small wheel.
- Spin the wheel again so the letter no longer line up.
- To decode the message, turn the wheel so that the key letter on the small wheel once again lines up with the “A” on the larger wheel. Now, all other letters should be aligned, and you should be able to decode the message.
